

Experiments// You need to **develop** ideas by **making** more experiments, considering variety, quantity and quality.

Plan the experiment: Plan your work in a **time schedule** and **bring the material needed** to do it in the studio.

> **What will the workshop be about?** Explain the purpose and steps.

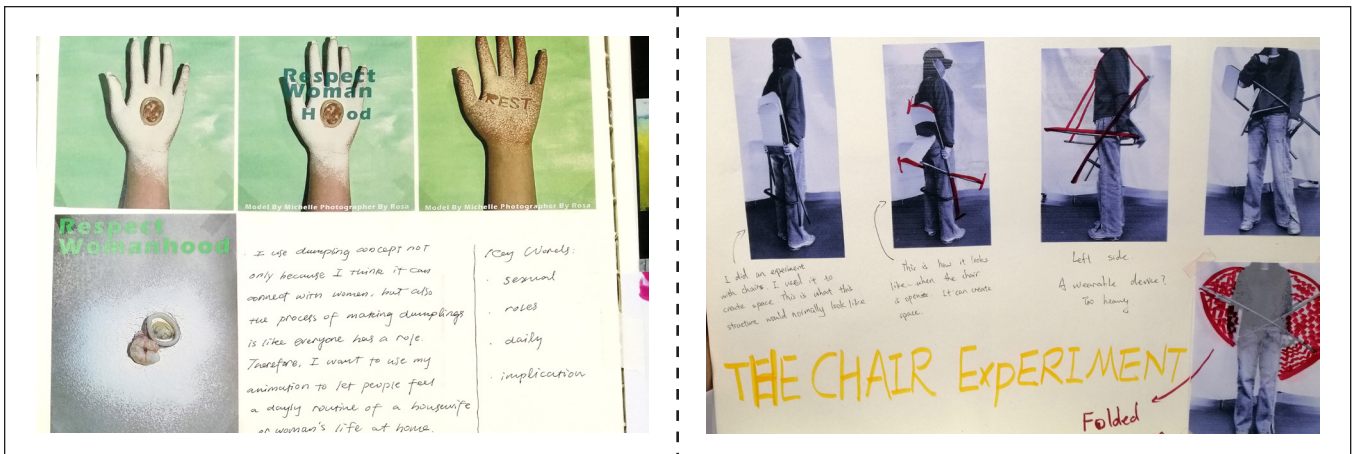

> **What media and material will you use?**

> **What do you want to learn from this experiment?**

Document the experiment

1. Do your experiment and **take photos** of each step. Print the images and paste them in your sketchbook.
2. Explain the purpose of the experiment and **evaluate what worked, what hasn't** and **what could be improved**.

Mistakes and challenges are wanted in first trials, as solutions or new approaches may suddenly appear from them.
